ASP.NET MVC 4 is a framework for developing highly testable and maintainable Web applications that follow the Model-View-Controller (MVC) pattern. The framework encourages you to maintain a clear separation of concerns— views for UI, controllers for handling user input, and models for domain logic. ASP.NET MVC applications are particularly suited for unit testing and using test-driven development (TDD) techniques.

ASP.NET Web Forms bring to web applications the model of writing event handlers for events that occur in the user interface. Web Forms abstracts this model so that the underlying mechanism of capturing an event on the client, transmitting it to the server, and calling the appropriate method is all automatic and invisible to you.
