I have included an introduction to most of the topics of elementary number theory. In Sections 1 through 5 the fundamental properties of the integers and congruences are developed, and in Section 6 proofs of Fermat's and Wilson's theorems are given. The number theoretic functions d , σ , and ϕ are introduced in Sections 7 to 9. Sections 10 to

Solve for natural numbers: $(2a + 3)(3a + 4) = 35b$. Find a and b be natural numbers, such that $(2a + 3)(3a + 4) = 35b$ One can see $a = 1, b = 1$ is a solution. The challenge is to prove there are no other solutions. My intuition is that $2a + 3 = 5^k \dots$ elementary-number-theory. asked 18 hours ago.

The "elementary number theory" on the other hand is really what it claims to be. The explanations are really good. So are the proofs. I like this book because it never claims something to be too obvious not to give an example of it. I only start reading chapter 4 myself now but I am already convinced that this pace and level is what I need.
