[Holt Biology Ecosystems Concept Mapping Answers](#)

Key points. An ecosystem consists of a community of organisms together with their physical environment. Ecosystems can be of different sizes and can be marine, aquatic, or terrestrial. Broad categories of terrestrial ecosystems are called biomes. In ecosystems, both matter and energy are conserved.

[What is an ecosystem? \(article\) | Ecology | Khan Academy](#)

Natural ecosystems may be terrestrial (such as a desert, forest, or meadow) or aquatic (a pond, river, or lake). A natural ecosystem is a biological environment that is found in nature (e.g. a forest) rather than created or altered by man (a farm). Humans have modified some ecosystems for their benefit. These are artificial ecosystems.

[Introduction to Natural Ecosystems - Owlcation - Education](#)

Your ecosystem, once again, it could be a very small region, it could be a very large region, but it's made up of all living things, the biotic factors, and the non-living things, the abiotic factors.
